WORKING PAPERS

1. **"Disaster, Structural Change, and Incomplete Labor Absorption"** [pdf]
   Natural disasters devastate communities and destroy productive capacity, while also potentially triggering substantial reconstruction investment. I study the catastrophic 2004 Indian Ocean tsunami in a low-income country using a rich Indonesian household dataset and a difference-in-differences design comparing working-age residents in affected and unaffected coastal districts. The disaster causes an employment rate shortfall that persists for a decade in affected districts relative to the control group. The agricultural employment rate falls sharply, while gains in industry and services offset less than half of the decline. This pattern is consistent with distress-driven agricultural contraction and reconstruction-induced expansion in non-agricultural sectors. The negative employment effect is particularly pronounced among women. I discuss differences in human capital and care responsibilities, along with social norms and employer discrimination as potential explanations for this gender disparity. Structural change in employment can therefore coexist with incomplete labor absorption and wider gender employment gaps.
